

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

in the 'Catalogue,' but it is not always clear whether the information given is new or taken from published sources, as the proposed bibliography of works consulted has been omitted, it having been found, perhaps, too voluminous for the space at the author's command. As a supplemental part, or 'addendum' "will, it is hoped, be published in the near future," to include the voluminous "notes on and references to the species included in the first two parts of this Catalogue," it may be that we shall have a bibliography in the proposed additional part. Part III closes with two pages of addenda and an index to the whole work.

Mr. Macoun has succeeded in bringing together and rendering available a vast amount of information on the distribution and habits of Canadian birds, and has thereby placed the ornithological world under grateful obligations.—J. A. A.

Todd on the Mammal and Bird Fauna of Beaver County, Pennsylvania.¹—Beaver County, in its faunal relationships, is Carolinian, a dozen or more characteristically Carolinian species of birds being enumerated by Mr. Todd as of common occurrence in the County. The lists are briefly annotated; the bird list numbers 178 species, and is believed to be fairly complete.—J. A. A.

Stone on Birds and Mammals from Mt. Sanhedrin, California.²—Mount Sanhedrin is in Mendocino County, California, and attains an altitude of 5,000 feet. The birds here recorded were collected by Mr. A. S. Bunnell of Berkeley, and number 56 species, with field notes on these and 33 others observed by Mr. Bunnell. As nothing had previously been published on the region, the present paper forms a welcome addition to the faunal literature of California.—J. A. A.

Raine on the Eggs of the Solitary Sandpiper.³—"At last," says Mr. Raine, "the long-sought for eggs of the Solitary Sandpiper have been found, and it affords me much pleasure to be the first ornithologist to have the opportunity of recording its nesting habits, which are unique amongst North American birds, for I have positive proof that this species lays its eggs in the [abandoned] nests of other birds." After considering
